

# **bonding source**

**Micro Chisel Blade (Side View)**

**Micro Chisel in Pin Vise**

Bonding Source introduces a family of Micro Chisel Blades for use in microelectronics assembly and rework. The blades are used for die removal, and to clean excess cured epoxy and solder. The chisel blades are more effective than traditional Exacto or Beaver blades for these tasks because of the flat chisel face.

The blades are 1" long and are offered in widths of .017", .025", and .034".

**Micro Chisel Blades 25 piece pack: \$90.00.**

**30 piece Variety Pack: \$125.00**

- 10 pieces of .017" blades
- 10 pieces of .025" blades
- 10 pieces of .034" blades
- One pin vise

**Pin vises sold separately: \$12.50**

Every assembler, technician, and process engineer should have a pack in their tool box!
